Senior Backend Software Engineer

Java | Spring Boot | GCP | Distributed Systems | Kubernetes

[LinkedIn](#) | [GitHub](#) | [Technical Blog](#)

Bangalore, India

Notice Period: 2 Months

PROFESSIONAL SUMMARY

Senior Software Engineer with 9+ years of experience designing scalable backend applications, cloud-native microservices, and distributed data processing platforms. Experienced in Java, Spring Boot, Vert.x, Kafka, Kubernetes, and Google Cloud Platform, with hands-on expertise in Dataproc, Dataflow, BigQuery, Cloud Composer, and Apache Spark. Proven track record of productionizing ML solutions, optimizing large-scale distributed systems, leading engineering initiatives, and delivering reliable enterprise applications.

TECHNICAL SKILLS

Languages: Java (8/11/17/21), SQL

Backend: Spring Boot, Spring Cloud, Spring Batch, Vert.x, REST APIs, gRPC, Microservices

Cloud: Google Cloud Platform (Dataproc, Dataflow, BigQuery, Composer, Pub/Sub, Cloud Storage)

Big Data: Apache Spark, Hadoop, Hive, MapReduce, Parquet

Databases: Oracle, MSSQL, BigQuery, Hive

Messaging: Kafka, Google Pub/Sub

DevOps: Docker, Kubernetes, Helm, Jenkins, GitHub Actions, CI/CD

Observability: Dynatrace, OpenTelemetry, Kibana

Tools: Git, IntelliJ IDEA, VS Code, Postman, Swagger

AI & Developer Tools: GitHub Copilot, Claude, Codex, MCP, Prompt Engineering

PROFESSIONAL EXPERIENCE

American Express

Software Engineer

Nov 2022 - Present

- Design and implementation of an **automated ML retraining platform**, enabling end-to-end model deployment through CI/CD pipelines and eliminating manual deployment activities for model retraining.
- Designed and developed a **Google Cloud-based UAT pipeline** for validating machine learning models, automating model testing and approval before production deployment.
- Led the implementation and productionization of **XGBoost, Survival model, and Isolation Forest** models by developing scalable inference APIs, feature validation services, and deployment workflows.
- Designed cloud-native data processing solutions using **Google Cloud Dataproc, Cloud Composer (Apache Airflow), Astronomer, Dataflow, BigQuery, Pub/Sub, and Cloud Storage** to support distributed batch processing and analytical workloads.
- Designed and developed high-performance backend microservices using **Java 21, Spring Boot, Vert.x, REST APIs, and gRPC** for real-time risk evaluation and machine learning inference.

- Made key architecture and performance design decisions for **latency-sensitive American Express card transaction systems**, optimizing API response times, backend communication, and overall system throughput.
- Developed scalable event-driven solutions using **Kafka** and **Google Pub/Sub**, enabling reliable asynchronous communication across distributed microservices.
- Migrated enterprise applications to **Kubernetes-based private cloud** infrastructure and automated deployments using **Helm**, **Jenkins**, and CI/CD pipelines.
- Investigated and resolved complex production issues using **Dynatrace**, distributed tracing, JVM performance analysis, and backend performance tuning to improve application reliability.
- Led technical design discussions, code reviews, and mentored a team of four engineers while collaborating with architects, product owners, and cross-functional teams to deliver enterprise solutions.
- Adopted AI-assisted development using **GitHub Copilot**, **Claude**, and **Codex** to accelerate software development, generate boilerplate code, perform code reviews, troubleshoot production issues, and improve engineering efficiency.
- Designed and developed a **GenAI-powered engineering assistant** integrating GitHub Copilot, MCP, and Dynatrace to analyze production telemetry, identify performance bottlenecks, and recommend application and infrastructure optimizations.

Technologies: Java 17/21, Spring Boot, Spring Cloud Gateway, Vert.x, REST, gRPC, Kafka, Apache Spark, GCP (Dataproc, Dataflow, BigQuery, Composer, Astronomer, Pub/Sub, Cloud Storage), Kubernetes, Helm, Jenkins, Dynatrace

Harman Connected Services

Senior Engineer Product Development

Jun 2021 - Nov 2022

- Designed and implemented Spring Boot microservices to modernize a monolithic assessment platform supporting enterprise certification programs.
- Developed scalable backend services and optimized SQL Server stored procedures, improving application maintainability and database performance.
- Led proof-of-concept initiatives to evaluate modernization strategies and resolved production issues to enhance system stability.
- Collaborated with product owners, QA teams, and developers to deliver high-quality releases using Agile methodologies.

Technologies: Java 11, Spring Boot, Microservices, MSSQL, REST APIs

Accenture Solutions Pvt. Ltd.

Application Development Analyst

May 2020 - Jun 2021

- Developed Spring Batch applications for high-volume insurance claim processing and optimized batch execution by migrating output processing from flat files to relational databases.
- Resolved production defects, enhanced application performance, and supported end-to-end release activities.

Technologies: Java 11, Spring Batch, Spring Boot, Oracle, SQL

Tata Consultancy Services

Systems Engineer

Nov 2016 - May 2020

- Developed backend applications using Java, Spring Boot, Hibernate, and JPA while integrating enterprise systems through REST and SOAP services.
- Automated SQL-based operational activities and delivered reusable integration adapters supporting enterprise automation platforms.

Technologies: Java 8, Spring Boot, Hibernate, JPA, REST, SOAP, MSSQL

EDUCATION

Bachelor of Engineering (Computer Science & Engineering)

Visvesvaraya Technological University

CGPA/Percentage: **77.9%**

2012 - 2016
